

# Read me

## Commands:

- make – compiles the project
- make clean – cleans project compilation files
- make run – compiles and runs the project

## Errors:

- In the printing macros there are two characters missing. The % and the “
- When loading a value greater than  $2^{16}$  it presents the instructions needed but doesn't calculate the respective values.
- There's a grammar error in which the project doesn't read empty labels such as l47 in the ragbag example given from the teacher

Appart from those Errors described above it is possible that there are some more but I did not found them.
